Alle anderen geprüften Rundzugproben zeigen einen typischen Teller-Tassen-Bruch Anhang B, Bild B 5. Die dort durchgeführten Werkstoffuntersuchungen ergaben eine Kerbschlagarbeit bei Raumtemperatur von über 280 J in Quer- und über 300 J in Längsrichtung.

Furthermore, the flooding characteristics obtained from the different experimental runs are presented in terms of the Wallis parameter and Kutateladze number, which are commonly used in the literature.

International Journal of Materials and Product Technology 2008 32, pp. Die Charakterisierung des Kriechens in der Faserebene zeigte die Schwierigkeit einer zuverlässigen Kriechversagensvorhersage bei der Beanspruchung in der Faserebene auf. The model is based on an simple parallel and serial set-up of single permeabilities of flow channel and fiber tows.

Transformation of these bands, including their blue-shift with the increasing annealing temperature could be explained via a quantum-confinement mechanism, by size and structural changes in Ge nanostructures.

For this purpose, mechanical dispersion technologies have been chosen and applied, which break the agglomerates under high shear forces.
