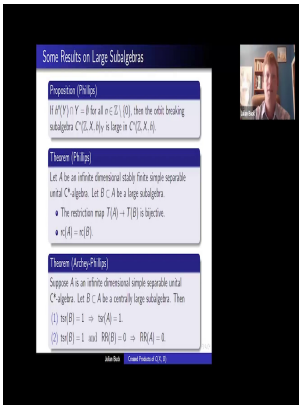
Crossed products of C*-algebras

American Mathematical Society - Crossed Products of C^{*}



Description: -
-
Forest products industry -- United States -- Computer programs.
Investment analysis -- Computer programs.
JEFFI (Computer program)
Paris (Ky.)
Kentucky
Public buildings
Fishery management -- California.
Fishery management -- Oregon.
Fishery management -- Washington (State)
Anemia.
Forest site quality -- New England.
Discriminant analysis.
Operator algebras
C*-algebrasCrossed products of C*-algebras
-
Mathematical surveys and monographs -- no. 134Crossed products of C*-algebras
Notes: Includes bibliographical references (p. 521-528) and indexes
This edition was published in 2007

AMS eBooks: Mathematical Surveys and Monographs

These are actions where the group need not be locally compact, or the action need not be strongly continuous. We give complete descriptions of the tracial states on both the universal and reduced crossed products. Roughly speaking, crossed product is the expected structure for a of a semidirect product group.

Crossed product

In particular, we find that if the Borchers-Arveson minimal implementing group is cross, then so are all other implementing groups.

Christopher Phillips is a Professor at the University of Oregon in Eugene, OR, USA.

ROOM ONE: Characterizing traces on crossed products of noncommutative C*

I have adopted the usual conventions when working in the subject.

The K

This corresponds to X having an infinite G invariant measure without atoms, absolutely continuous with respect to the measure on X.

The K

Sudo, K-theory of continuous fields of quantum tori, Nihonkai Math. The other result states that a full and a reduced crossed products coincide whenever their common underlying automorphism group is amenable. Some representations associated with crossed products are also briefly discussed.

© , American Mathematical Society · · ·. In Chapter 3, we study vector-valued integration on groups and prove a version of the Fubini theorem for vector-valued integrals.

Crossed Products of C^{*}

There is a full extension in the presence of a cyclic invariant vector, but otherwise one needs to determine the vanishing of lifting obstructions.
