The water is then drained into where it is stored for further use in the succession of power stations. The International Council on the Exploration of the Sea ICES is advancing transboundary, collaborative offshore wind and marine research through working groups that consider marine renewable energy, benthic interactions with offshore renewable energy, and, most recently, fisheries and offshore wind. Royal Belgian Institute of Natural Sciences, OD Natural Environment, Marine Ecology and Management, Brussels, 134 pp.

Tongariro Power Scheme

Fisheries science draws on the relatively well-understood aspects of species productivity recruitment and estimation of fishing mortality to achieve management objectives Large et al. Department of Conservation, Wellington, New Zealand 1989. Fish passes are used to facilitate fish passage around instream structures, but limited information is available about design aspects that influence the ability of fish to negotiate the structures.
