Metabolic Support

It is for this reason that this value has begun to be used as an indicator of poor postoperative functional recovery in the colorectal population.

Promoting Perioperative Metabolic and Nutritional Care

Intensive Care Med 2004; 30: 748-756. Insulin resistance: a marker of surgical stress.

stress response to trauma and surgery

A 2012 Cochrane review identified that intensive glycemic control protocols for patients with diabetes mellitus undergoing surgical procedures were not supported by adequate scientific evidence, and a separate Cochrane review found insufficient data to support the routine adoption of strict perioperative blood glucose control to prevent surgical site infections.

Metabolic response to injury

By contrast, the patients who deteriorate by more than 20 m preoperatively experience a greater rate of complications.

Stress or metabolic response to surgery and anesthesia

When the increase in counter-regulatory hormones such as glucagon, growth hormone, catecholamines and glucocorticoids, and cytokines such as IL1, IL6 and TNF is combined with the increase in catecholamines, dextrose and nutritional support, they play an important role in relative insulin resistance. Prehabilitation employs a multidisciplinary approach to modify behaviors that have an impact on postoperative recovery including smoking, mental wellness, obesity, poor glycemic control, reduced functional capacity, and malnutrition.

Systemic Response to Injury and

For these reasons, the details of metabolic response to trauma should be known in managing these situations and patients should be treated accordingly. The effect of epidural analgesia on the adrenocortical response to surgery.

Response to trauma and metabolic changes: posttraumatic metabolism

Both afferent input from the operative site to the central nervous system and the hypothalamic—pituitary axis, and efferent autonomic neuronal pathways to the liver and adrenal medulla are blocked.

Promoting Perioperative Metabolic and Nutritional Care

Changes are thought to be beneficial for short-term survival.
