No. 329

J Obstet Gynaecol Can 2015;37 10 :936—42.

Table 3 from No. 329

For most youth, taking a complete medical history, along with weight and blood pressure measurement, are sufficient.

Canadian contraception consensus

Strategies that eliminate obstacles to initiating and continuing contraception are provided. Methods used at the time of intercourse: Male and female condoms, diaphragms, cervical caps, sponges and spermicide.

Universal access to no

However, none of these steps are necessary for prescribing contraceptives except in the case of IUSs or IUDs, where STI testing should occur at or around time of insertion.

No. 329

Bone mineral acquisition during adolescence and early adulthood: A study in 574 healthy females 10-24 years of age.
