### Chapter 1

Geological Survey of Canada, Open File 2257. Other characteristic features are alluvial fans that are built from sediments eroded from the adjacent mountains, rock pediments that are sloped and eroded by stream floods, desert pavements, and wind-accumulated sand dunes fig.

### Geological evidence of a palynologically defined ...

Geochemical orientation studies in southern Baffin island.

### Woody Point, Newfoundland and Labrador

Since ice-rafting is the preferred explanation for all of the marine geological contexts discussed here, each date should refer to a short interval, as should this average. Barr H77 1997 Marshall, Sandra An evaluation of drumlin orientation, striation record and subglacial erosional forms in the Lunenburg and Halifax areas of Nova Scotia I. Geological Survey of Canada, Open File 3763.

### Regional Lake Sediment/Water Geochemistry

The Oldest Rocks: The Piedmont and Blue Ridge northeast to southwest through the center of the state, the Piedmont and Blue Ridge provinces are composed mainly of igneous rocks formed by the cooling and crystallization of molten magma and metamorphic rocks caused by extremely high temperatures and pressures deep below the earth's surface. Geochemical orientation surveys for uranium in southern British Columbia. As a result, the layers are no longer horizontal but are bent into great folds.

### The inner shelf geology of Atlantic Canada compared with the North Sea and Atlantic United States: Insights for Atlantic Canadian offshore wind energy

The Payette Section to the west is generally lower in elevation. National geochemical reconnaissance surveys, southeastern Ontario.

## **Multibeam bathymetry of glaciated terrain off southwest Newfoundland**

Geological Survey of Canada, Open File 2471. The samples were held at 500°C for 4 h, and then allowed to cool in a desiccator prior to weighing. Spooner H79 1998 Guy, Gordon H.
