reach consensus on the respective roles and responsibilities of civilian and military institutions in private sector development, as well as the role development plays in contingency operations. If you would like information about this content we will be happy to work with you.

Africa's path to growth: Sector by sector

One is a new kind of industry structure—nucleus farms—to accelerate the productivity of small-holders. . The producers' potential return on those new goods or services would depreciate, discouraging them from making the investment in the first place.

Digital India: Technology to transform a connected nation

In tier-three markets, for example, consumers have low spending power and the infrastructure is poor, so this company simplified production by minimizing the number of SKUs, built strong distribution partnerships, concentrated marketing expenditures at the point of sale, and used smaller pack sizes to increase trial purchases and volumes. Digital technology can alter this ecosystem in several ways.

Broadband Telecommunications for the 21st Century: Five Principles for Reform

Over the next five years to 2023 the market is expected to grow very strongly but overall market penetration will remain extremely low compared to other nations. The establishment of the Public Service Commission to regulate the industry as well as other utilities, meanwhile the Bureau of Posts was created to operate telegraph services nationwide. It is in many important respects a model of ambiguity or indeed even self-contradiction.

Anshu Prakash: Government working on spectrum reform measures: Telecom Secretary, Telecom News, ET Telecom

In Africa, many categories still are not fully developed; for example, usage per capita of toothpaste is lower there than it is in comparable Asian countries.

The World Bank's new pragmatism: Telecommunications reform in Asia

If regulators were to grant companies the spectrum and regulatory freedom to offer wireless broadband service, they likely would discover that it is more efficient and less costly to consumers than wireline telephone or cable. However, the focus will have to be on developing new over-the-top services and apps over these networks. State and local regulations that interfere with interstate communications commerce must be prohibited.
