### Framework for addressing occupational safety of de

Monthly narrative reports from both headquarters and regional offices, 1917-61. Please remember that by requesting an investor kit, you are giving permission for those companies to contact you using whatever contact information you provide. Injuries We expected to see about 68 deaths from injuries and found 143.

### Records of the U.S. Bureau of Mines

They can answer questions about cancer. This was over 3 times more deaths than expected.

### Framework for addressing occupational safety of de

The four types of records used were: work histories, radon measurements in the mines, smoking histories, and death certificates for deceased miners.

### Records of the U.S. Bureau of Mines

NIOSH made the study to find if uranium miners have an increased risk for lung cancer and other lung disease when compared to the U.
