It is a small plant, only growing about three-quarters of a foot tall, but it produces blooms between June and the first frost. Although they have adapted to survive in such harsh climates, their bloom cycles are extremely sensitive and dependent on a variety of factors including frequency of rainfall during winter, moderate temperatures, wind, and elevation.

Database of Common Names of Plants

They are characterized by generally having a darker center, and the leaves are silvery in color.

Members of the mustard family, these plants smell sweet.

Oldest flowering plant

Partial sun, or brightly-lit shade is best. It grows into a deciduous shrub between 3 and 4 feet tall. Lotus The or sacred lotus is known by the species name, Nelumbo nucifera.

Database of Common Names of Plants

The older kinds of flowering quince do yield a fruit, and you could make jelly from it, but it's not worth the effort. The flowers tend to be pink and white, although some are pure white, and they are classified as a perennial. It is a perennial that has a native range that extends from Europe to southern Russia.
