Module 3: Clinical Assessment, Diagnosis, and Treatment

Has high and durable negative predictive value 5. These measurements are particularly prone to errors, mainly due to inaccuracies in valve area. From Table it can be seen that F-measure seems to lead to a different configuration of the LS-SVM while the other three criteria lead to classifiers with similar performance.

Methodology of Doppler assessment of the placental & fetal circulation

Unsworth and Vause 2010 Aspiration of meconium can occur in-utero with fetal gasping, or after birth, with the first breaths of life. Though you will ultimately need these people to see you through your recovery, they do not have the training and years of experience that a psychologist or similar professional has.
