Exploring the nature of science through courage and purpose: a case study of Charles Darwin's way of knowing

Darwin many years before but not then published, and as it has thus an historical interest, a few words of personal statement may be permissible. Soon, Darwin and Fox were parading about the college grounds, sifting through leaves and seeking out that which had yet to be caught in their nets. Given that sampling of DNA sequence data is limited to extant species and there are known problems with estimating extinction rates from molecular data, it might be argued that molecular data have a limited role in examining extinction rates, a processes central to the biodiversity gradient debate.

Molecular evolution and the latitudinal biodiversity gradient

Half of its senses and faculties become quite useless, and the other half are but occasionally called into feeble exercise, while even its muscular system is only irregularly brought into action. After a short time of unemployment Wallace got hired at the Collegiate College in Leicester as a graphic designer, cartographer and land surveyor. When Wallace came back to England in 1862 he met Darwin and both respected each other in friendship.

Henry Bates (February 8, 1825 — February 16, 1892)

Evelyn Hutchinson 1903-1991 at Yale University. Observing how birdwing species differed on different islands helped Wallace see how species change. Nevertheless remained Wallace as a convinced defender of the principle of natural selection for his life long.

Henry Bates (February 8, 1825 — February 16, 1892)

Gunther, of the British Museum, who has kindly furnished some of the details here referred to, assures me that this is the case; and that red, black, any yellow rings occur together on no other snakes in the world but on Elaps and the species which so closely resemble it. Some claim that there has been a conspiracy against Wallace and that Darwin took advantage on Wallace, taking one of Wallace's ideas as his own.

Exploring the nature of science through courage and purpose: a case study of Charles Darwin's way of knowing

In the Island of Celebes I found one of this group, having the whole body and elytra of a rich deep blue colour, with the head only orange; and in company with it an insect of a totally different family Eucnemidæ with identically the same coloration, and of so nearly the same size and form as to completely puzzle the collector on every fresh occasion of capturing them.

Wallace quotes

Particularly legendary is his splendid idea of the natural selection, which was an inspiration he had when suffering heavy fevers caused by a infection and was still thinking his ideas over and over.

Molecular evolution and the latitudinal biodiversity gradient

It was this circumstance that led Mr. He looks upon every species of animal and plant now living as the individual letters which go to make up one of the volumes of our earth's history; and, as a few lost letters may make a sentence unintelligible, so the extinction of numerous forms of life which the progress of cultivation invariably entails will necessarily obscure this invaluable record of the past.

Natural selection and tropical nature; essays on descriptive and theoretical biology : Wallace, Alfred Russel, 1823

After 28 days on sea the ship's freight started to burn and the ship sunk.
