## Fertility Preservation at OHSU

Research studies have helped us figure out which cancers have the greatest risk and which have the least risk. Cloning Issues in Reproduction, Science, and Medicine. Tissue processing in the United States is governed by mandatory requirements enforced by federal and state regulatory authorities.

## ReproTech

The Fertile Future Program was founded at OHSU in 2004 to help young people with cancer preserve their fertility. Talk with your doctor about your risk based on the type of cancer you have and the treatment you have already received. The significance of this example of 'natural selection' is unknown and there is a serious risk of maturing imperfect or less perfect ova which 'nature' would otherwise have selected out.

## Donated Ovarian Tissue in Embryo Research and Assisted Conception

Male and female reproductive systems are made up of various types of reproductive tissue. The legality of oocyte donation varies by country. Therefore, research on human embryos is forbidden.

## Donating Reproductive Tissue

.

## Fertility Preservation at OHSU

The number of donor egg cycles has significantly increased in the past decade; the North American Society for Assisted Reproductive Technology SART, 2015 registry reported 20,435 cycles in 2015. With respect to consent please see below at h. Embryo donation is also a possibility.

## **Embryo Donation**

We have along standing comprehensive program for the preservation of reproductive potential through egg, sperm, embryo and ovarian tissue cryopreservation. Among the principles we use in forming such judgements is that of the inviolability of innocent human life, which Catholics, along with many others, consider begins at conception.

## **Fertility Preservation: Ovarian Tissue Freezing for Young Females With Cancer**

Certain types of cancers had higher rates of metastasis than others gastric cancer — 55%, leukemia — 8. In the case of treatment we consider the use of such tissues to be contrary to the nature of marriage. The first form seems acceptable, at least ethically, because it is closer to the purpose for which these embryos are created, namely to help sterile couples.
