### Predicting hydrology in ungauged basins using the DDD model

This study will continue the work published in Skaugen et al. Glaciation of the mountain territories of Kazakhstan Prospects of development Indicator of authority of glaciologists of the Institute is the Central Asian Regional Glaciological Center under auspices of the UNESCO created by the Institute of Geography on the basis of the Department of Glaciology in accordance Law of Republic of Kazakhstan about ratification of Agreement between the UNESCO and the Government of the Republic of Kazakhstan signed on 1-th of March 2017 in Astana by President of the Republic of Kazakhstan Nazarbaev N.

M.F.Meier

Culberg, Subglacial Lake-Floor Characterization in Radar Data: from Archival to Modern, AGU Fall Meeting, Online, December 1st — 17th. Firstly, it is a place of peace, international cooperation and is fully protected for the use of science and research only.

### Two Decades of Temperature Change in Antarctica

Selected papers from the Workshop in Almaty, Kazakhstan, 2006. A decision to establish a Commission des Neiges was made at the 1933 general assembly. IACS also conducts much of its business via electronic communication, including video links and on-line voting on bureau resolutions.

### Department of Glaciology

But cryospheric science also considers glacier and ice sheet modelling; sea ice dynamics and ocean—ice—atmosphere interaction; ice mechanics and rheology; and atmosphere—snow interaction, including chemistry, snow redistribution by wind, remote sensing and geophysical methods; and much more. The CIG reports on glacier variations ended at the outbreak of the First World War.

### GeoLog

In theory, such an endeavor could slow the rate of sea level rise worldwide, perhaps for hundreds of years.

### **Two Decades of Temperature Change in Antarctica**

However, the intersection of the scientific interests of liquid water hydrologists and glaciologists is not always complete and this can be a sensitive issue. In response, Dr Meier gave the following speech: Mr President, Ladies and Gentleman, Thank you very much for this singular honor! Atomic Energy Agency, 4, 129—143, RN:38048670, 1974.
