Without the Moon, Would There Be Life on Earth?

The Northern Hemisphere has one change in surface temperature controlled by its oceanic area and another controlled by its land area.

ocean

That is one reason why so much time and energy still goes into unraveling the mystery of life's origins on our own planet. This asymmetry of land and water distribution between the Northern and Southern hemispheres makes the two hemispheres behave very differently in response to the annual variation in received by Earth.

Without the Moon, Would There Be Life on Earth?

This is especially true in the temperate latitudes.

ocean

If, however, life originated in tidal waters, he says, then tidal cycles could have played a major role. Boundaries of the world's oceans and seas.

ocean

The large range of volumes in these reservoirs and the rates at which water cycles between them combine to create important conditions on Earth.
