The Billions of Victims of the Heat Dome

More than 83% of the roughly 15,000 adults in Butte Creek — the largest population of the federally protected fish, near Chico, California — died according to Howard Brown, a senior policy adviser with NOAA Fisheries, west coast region. Introduction At first sight, barnacles look like slight projections of the rocks on which they grow, but closer inspection will show that each contains a well developed animal which is wonderfully adapted to its mode of life.

Barnacles of British Columbia

Coastal rain wolves live on the outer Islands of the BC coast. The bases of some barnacles, such as *Balanus nubilus*, are very thick and are permeated by pores similar to the parietal tubes in the walls.

Barnacles of British Columbia

The real-time effects are already being seen throughout the West, where farmers and ranchers have struggled to adapt to extremely dry conditions even before temperatures began to rise.

Barnacles of British Columbia

On June 28, her thermal-imaging camera showed the temperature nearing 125 degrees. What do you do to stay, you know, sane? Occasionally an individual will be found growing alone and uncrowded; under such conditions the shell will assume its normal shape, a steep-walled cone with a jagged irregular opening at the top. Mussels laid agape along the rocks, the tissue crisped between their shells.

The Billions of Victims of the Heat Dome

E-Fauna BC is a work in progress, a 'living book' that will be updated continuously.

The Billions of Victims of the Heat Dome

They generally deal with the heat by reducing their activity, including eating, and by panting to try to cool themselves. Monographic des Cirrhipedes au Thecostraces.

Heat wave spread fire that put out Lytton, British Columbia

Mountains of warped metal and mangled wood protruded from gutted buildings. The thickened part of the shell around the interior of the 'orifice is called the 'sheath'.
