Significance to humans Elephants, especially in Asia, have a long history of interaction with people, and an important place in many cultures. He then touches his trunk tip on a specialized taste gland, the Jacobson's organ, on the roof of his mouth. In many areas, there are daily rhythms: where both woodland and open grassland are available, for example, the elephants may spend the morning and early afternoon browsing in the woodland, emerging in the cool of the late afternoon to graze.
