Direct Skin Friction Measurements at Mach 10 in a Hypervelocity Wind Tunnel

Which of the following instrument can be used for measuring speed of an aeroplane a Venturimeter b Orifice plate c hot wire anemometer d rotameter e pitot tube.

Direct Skin Friction Measurements at Mach 10 in a Hypervelocity Wind Tunnel

The local wind velocity is added to the rocket velocity to get the airspeed velocity of the rocket. A simple and efficient way of describing the 3D rotation is by using unit quaternions.

Viscous 11 (1)

CenteringRing: A ring for centering components. Cavitation will begin when a the pressure at any location reaches an absolute pressure equal to the saturated vapour pressure of the liquid b pressure becomes more than critical pressure c flow is increased d pressure is increased e none of the above. The free water surface will a be horizontal b make an angle in direction of inclination of inclined plane c make an angle in opposite direction to inclination of inclined plane d any one of above is possible e none of the above.

The Skin Factor

Calibration Before facility testing, each sensor endured a rigorous series of calibrations designed to systematically evaluate individual aspects of its functionality. This produces an angle better representing the actual shape of the fin, as angle Γ c2 in Figure.
