Surveillance Study of the Contraceptive Intrauterine Device UT380®

Five-year review of copper T intrauterine device use at the University of Calabar Teaching Hospital, Calabar Open Access J Contracept.

Four years of a comparative study with Nova T and Copper T 200 IUDS

This is a retrospective study of missing IUDs managed at family planning unit of FMC, Bida from January 2010 to December 2014. However, women randomized to interval insertion of an IUD are less likely to return for device placement.

Four years of a comparative study with Nova T and Copper T 200 IUDS

The increased risk of early discontinuation among adolescents, as compared with older women, may reflect lower adherence to the method.

Trend in the use of intra

Financial support and sponsorship Nil. Trends, patterns and determinants of long-acting reversible methods of contraception among women in sub-Saharan Africa. Only 8 teenagers accepted IUCD in the period under review.

African Journal of Medical and Health Sciences

Under the Affordable Care Act, most insurance plans are required to cover all forms of birth control, including IUDs, though they may not cover all IUD brands. Even though the studies were homogenous in their designs and comparators; statistically there was high heterogeneity in the effect sizes. In vivo measurements of uterine cavities in 795 women of fertile age.
