African Elephant

Fly parasites Diptera: Oestridae and Gasterophilidae of the African elephant *Loxodonta africana* Blumenbach and their problems. Both male and female African elephants have long upper incisor teeth which develop into ivory tusks which they can use to dig for food and water, and also strip bark from trees.

African elephants

Global sites represent either regional branches of The Nature Conservancy or local affiliates of The Nature Conservancy that are separate entities.

African Forest Elephant

Typically, elephants only give birth to one calf at a time, although twins do sometimes occur. It is distributed across 37 countries and inhabits forests, grasslands and woodlands, wetlands and agricultural land. There are several subspecies that belong to one or the other of these two main species, though experts argue over how many subspecies there are and whether or not they constitute separate species, according to the.

African Bush Elephant

Elephants are grayish to brown in colour, and their body hair is sparse and coarse. Asian elephants are smaller and tend to reach a shoulder height of between 6. The days and nights of zoo elephants: Using epidemiology to better understand stereotypic behavior of African elephants *Loxodonta africana* and Asian elephants *Elephas maximus* in North American zoos.

What Kind of Habitat Do Elephants Live in?

How many babies do elephants have? These specimens were shot in South Africa, in Zimbabwe, and area in Kenya, in Somaliland and in western Sudan, respectively. There are now only an estimated 400,000 African elephants left in the wild. Some of them are very good and others are a nightmare.
