The phase transformation of calcium carbonate from aragonite to calcite is dis- cussed. University of Southern Queensland , Toowoomba. In: Living with Environmental Change: Social Vulnerability, Adaptation and Resilience in Vietnam W.

Full text of water resources

The company also has produced products helpful in treatment of different types of effluents. The paper presents evidence which suggests that the

relative mobilities of the individual humic substances are also important.

Full text of water resources

Two zones of sediment porosity and diffusion rates were observed, 0-16 cm, and 60-120 cm. The variability of the constants for nitrification is greater than that for substrate utilization. The highest values of phytoplankton primary production and of the activity coefficient were found when herbivorous zooplankton development was significant and nutrient concentrations were at their minimum.
