Keyhole Cichlids

Again, parent size plays a big role in numbers produced, but 20 for a young fish, and 80 fry for an established, mature female are commonplace.

Tropical Fish Keeping

By popping out live young, parents don't need to expend time and energy protecting eggs and the sooner the fry become sexually mature, the sooner they can procreate to ensure the species survives if the parents get eaten. It is frequently found in waters where the bottom is detritus and muddy or sandy. It is currently being commercially grown in aquacultures.

Keyhole Cichlids

The omnivores are the peaceful kind that shows no violence or aggression.

How to breed livebearing fish

Raising and housing these fish is easy, but they require a special environment to live in.

Jaguar Cichlids

Keyhole Cichlids can be quite shy and will hide away in a tank if they are feeling nervous or threatened. Once again, this is highly dependent on your area, and you need to do a bit of research before you settle on what you want to breed. It will help reduce algae growth, will provide hiding places for the fish and will make the aquarium look more natural.

Four Aquarium Fish to Breed for Profit

At that length they will be able to swim fast and avoid being eaten by most of the large fish.
