## Laboratory Services: 2021 National Patient Safety Goals

When problems are detected or a request is made, a campus safety and security staff person will respond, reporting back to the director of campus safety and security and the environmental health and safety office. Each of these is discussed briefly below. Don't overlook the hazards and workspace requirements of others working nearby.

## Laboratory Standard & Design Guidelines

Makeshift or undersized tools are always a hazard. PPE storage should be separate from any storage provided for ordinary clothing. Two common systems, the Global Harmonization System required on SDS and National Fire Protection Association Hazard Identification System, are described in Appendix 4-B.

## Laboratory Safety Manual

Incidental release response should be done under the immediate supervision of the faculty member in charge of the laboratory, another faculty member, or the lab manager. When a new chemical is received it must be tagged and entered into the inventory by the faculty member or Lab Manager. It is important to recognize the similarities and differences of those system.

## Lab Safety Manual: Emergency Planning and Procedures

Rags, drawings, hand tools, lubricant containers and other loose objects should be kept away from moving machine parts and machine surfaces that may vibrate during machine operation. If the building is to remain closed, all exterior doors will be locked and signs posted indicating that the building is closed. Emergency evacuation routes from the building are posted on wall-mounted maps located at the north and south end of the CSC, next to the emergency showers.
