2011 Particle Accelerator Conference

Higher-order modes are damped effectively by removing rods from the lattice so that only the operating mode is supported with a high quality factor. Zhou KEK, Ibaraki, Japan The longitudinal wake field dominated by the CSR is important at the SuperKEKB damping ring.

Nigel Buttimore : Trinity Research

.

Nigel Buttimore : Trinity Research

Double linear functions, with varying slopes for each user, have been defined for the KSW generators waveforms according to detailed beam dynamic studies for all target intensities and emittances. The low α mode is also called 'isochronous' operation, it is used for short bunch operation, where intense signals of coherent sub-THz radiation are produced.

Polarized Antiproton Beams

The effect of these multipoles coupled with other errors will be discussed. The tunnel level marker and the magnet height were also surveyed.

Polarized antiproton beams

A summary of observations and measurements of intensity dependent single bunch effects is presented in this report. Department of Energy under Contract No. In this report, a prototype device will be presented, and technical details with fabrication will be discussed.
