These stages are crucial to sequential flow
of the planning logic and were completely
ignored in the old method inviting confusion
and unrequited subjectivity in the planning
of urban clusters. The latitude and
longitude on a map made against a local
datum may not be the same as one
obtained from a.

information principles, basic data gathering and operating surveying equipment. These stages were reexamined, developed and detailed to expose the need for the intervention of a geo-spatial information system in every step of the planning process Figure 3. The simplest model is to assume the earth is a perfect sphere.

Spatial analysis & modelling

It provides methods to model spatial correlation, and predict values at arbitrary locations interpolation. In conclusion, the semantic grid of spatial information system could improve the ability of the integration and interoperability of spatial information grid.
