About: Shapland Hugh Swinny

In the social sciences and the philosophy of the social sciences, positivism has supported the emphasis on quantitative data and precisely formulated theories, the doctrines of behaviourism, operationalism and methodological individualism, the doubts among philosophers that meaning and interpretation can be scientifically adequate, and an approach to the philosophy of social science that focuses on conceptual analysis rather than on the actual practice of social research. So, the information which we gather from our sensory experiences and interpreted through reason and logic leads to the construction of certain knowledge.

That is its practical value, the reason why so many people devote so much time to scientific work and governments today subsidise it so heavily. Paul Rock continues: We met regularly at the University of York, the home university of Laurie Taylor, an associate of Stan Cohen. This degree of interpretation of data by a researcher can result in a bias towards a particular conclusion, with certain results which fail to fit currently held theories being dismissed as anomalous or even completely ignored.

Does positivism really 'work' in the social sciences?

I was Treasurer for the first three British Criminology Conferences, which definitely brought on the grey hairs, but which also cemented the need for criminologists to meet and to interact with practitioners and policy makers. Raffaele Garofalo was the other theorist of positivist school who suggested criminals as a virus in society, and thus announced the idea of life locking up and removal of criminal Gottfredson et al. The policies of Washington to contain and crush, and of Havana to aid and extend, the socialist revolution have a lawful character.
