

# Performance survey of continuously reinforced concrete pavements in Texas - pragmatic application of rigid pavement research, research project 3-8-74-21

Center for Highway Research, University of Texas at Austin - Pavement Manual: Pavement Types

psl,  $I = [P] \cdot E_c = [P] \cdot E_c$  psl,  $k = [k] \cdot \text{psi}$ , and  $C_p = [C_p] \cdot \text{ft}$ . Using the design charts in FTE Figures 9.22 and 9.24, how thick must the concrete slab be? Submit a marked up copy of the design chart that shows your solution, including labeling each scale with the values used.

Version	PSALs	$S(\%)$	$I$	$E_c$	$k$	$C_p$
A	1.066	765	3.2	7.066	77	1.0
B	1.956	635	3.2	7.066	70	1.0
C	2.066	786	3.2	3.786	66	1.0
D	4.066	882	3.2	4.566	65	1.0
E	6.066	826	3.2	4.066	100	1.0
F	6.536	882	3.2	4.566	65	1.0
G	7.766	880	3.2	5.066	71	1.0
H	8.066	966	3.2	3.566	88	1.0
I	8.066	690	3.2	3.786	72	1.0

. In general, small particle size and higher specific surface area of mineral admixture are favourable to produce highly dense and impermeable concrete; however, they cause low workability and demand more water which may be offset by adding effective superplasticizer. Though bicycle and pedestrian projects are eligible for funding, HSIP has been largely overlooked as a resource for these projects.
