Technology and Religion

Can you be surprised that, in the absence of a perfect and complete phrasing of the principles of science and the principles of Technology, as I interpret it, means applying science in practical ways, producing particular kinds of machines or gadgets that people can use. If you wear clothes woven of linen, instead of sheepskins or goatskins, that again is a use of technology.

The Relationship Between Technology and Religion

They text, chat, download apps, play games, use social media as well as make online purchases. Such order as we find in nature is never force — it presents itself as the one harmonious adjustment of complex detail.

Technology and Religion

As human beings we have an impulse within us that leads us to pray. Is Religious Faith in Any Way Threatened by Technology? I would see conflict arising, not so much from science as such in the pursuit of truth, but from scientism, by which I mean the view that methods of scientific enquiry necessarily answer all the questions that we may wish to raise.

The Relationship Between Technology and Religion

Whenever I had religion class in grade school, we often referred to passages in an online Bible that everyone could have access to. Results also showed that the internet is deeply embedded in group activities and in how people create, join, participate in, and sustain groups. In *The Secular City* 1966, Harvey Cox praised what he called the disenchantment of nature, the elimination of its ghostly terrors, at first permitted in biblical religions by the concentration of all sacredness in the creator, excluding everything created, and then at last achieved by the antiseptic powers of modern science.

Technology and religion: A metaphysical challenge

Benedictine monks were among the first to use technology as a spiritual tool, but eventually, their status depended upon their loyalty to kings and popes — and so labor stopped being a form of prayer and became a means for wealth and taxes.

How does technology affect religion?

It has been assumed that technological progress will automatically result in an improved society — just witness the race to install computers in schools without any consideration of how they will be used, much less any attempt to consider who will pay for technicians, upgrades, training, and maintenance once the computers are purchased. There are societies where girls are regarded as inferior, and in due course there might arise a grave imbalance between the sexes. If on the other hand, it were a question of an organ transplant, that I could give to somebody who was half her age, and if that afforded a prospect that they might live for many years to come, with a full and active existence, then that would be very different.

Technology and Religion

Religion has not been demolished by tech advances, but it has been augmented by the many innovations including the Internet and mobile apps.

Technology and Religion

These tweets reach a wide audience and can inspire people to live a humble life each day. This goes well beyond the common fear of death and desire to overcome it and results in a negation of all we are in an effort to become something else entirely. But though we have greater knowledge today, it is a question whether we have greater wisdom.
