## 1918 Principles of General Physiology William Bayliss WWI Second Edition Revised

Mucous membranes line the entire digestive, respiratory, and reproductive tracts and most of the urinary tract. The amount adsorbed also depends on the amount of the charge, as is indicated by its connection with the dielectric constants of the constituents of the system; for example, more Congo-red is taken up from dilute alcohol than from water.

## General Principles of Physiology

. EFFECT OF TEMPERATURE ON ADSORPTION The effect of temperature on the rate of adsorption, in accordance with the previous paragraph, is found to be of the same order as that which it has on diffusion processes. The tendency for movement of solvent molecules to a region of greater solute concentration can be prevented by applying pressure to the more concentrated solution.
