Facts about speech intelligibility: human voice frequency range

Approximately 75 percent are of low intelligence while 10 percent may demonstrate high intelligence in specific areas such as math. The consonants k, p, s, t, etc.

Sound (Related to Speech)

I would like all of the actual phonemes taken into account like how 'exit' is pronounced 'egzit' or many past tense -ed verbs are pronounce with a 't' instead and so on. The has almost certainly been in some sense a speaking animal from early in the emergence of Homo sapiens as a recognizably distinct species.

The 44 Phonemic Sounds in English for Spelling

The q sound is found in kw words like bac kward and Kwanza. Speech Frequencies and Speech Discrimination Image courtesy of While it's unfortunate to have any form of high-frequency hearing loss is especially troublesome because this also happens to be the range where much of human speech is transmitted.

Speech Sounds Development Chart

In more recent years, it has been further modified by the need for children and their teachers to meet the functional Australian Curriculum, Assessment and Reporting Authority ACARA requirements that are not always congruent with standardised research.

High-frequency Hearing Loss High-frequency hearing loss causes special problems in understanding speech. Note: Each stage of development assumes that the preceding stages have been successfully achieved. It is important that the speaker aims to be understood, and that conversation always be a two-way street.

A note on the entropy of words in printed English

An HP-filter cutting everything below 500 Hz still leaves the speech signal understandable. Voice is generated by airflow from the lungs as the vocal folds are brought close together. I know it may not be the most accurate.
