## Full text of clinical treatise on the diseases of the nervous

Continued the oxalis, repeated the air, and opiate at bet-time. The same methods are to be adopted, modified according to circumstances, and according to the shape of the foreign body, when it has been pushed to the bottom of the meatus, or even into the cavity of the tympanum. Any type of damage or injury to the mouth, for instance, when the inside of the cheek is accidentally bitten or scraped by broken or jagged teeth or poor-fitting dentures, can cause blisters vesicles or bullae or ulcers to form in the mouth.

## A Treatise on Madness, William Battie, 1758 AD

CEdema, flattening of the con- volutions and softening may develop as secondary lesions.

## Osteopetrosis

Popham and Ogle have differentiated amnesic aphasia, in which there is loss of memory of words as symbols of ideas, from ataxic aphasia, in which loss of co-ordination occurs in the muscles presiding over the articulation of speech. For which reason it deserves the serious consideration of our governors, how far it is their duty by a total prohibition of the cause to prevent those frequent effects of temporary but real Lunacy, for which many wretches are executed, who in reality are guilty of debauchery alone, which has been rendered familiar by the custom or rather the convenience of their country, and is allowed or commuted for by the laws of the revenue.

## A treatise on nervous diseases : their symptoms and treatment : a text

Mouth sores may be caused by an infection, a bodywide systemic disease, a physical or chemical irritant, or an allergic reaction see table. Anatomically, tubercular basilar meningitis develops in the midst of an inflammatory process. Bad diet, mental and physical over-exertion,

constipation, vomiting, excesses, forced expiratory movements, etc.

#### **Full text of clinical treatise on the diseases of the nervous**

It will pick the bed-clothes, have subsultus tendinum, and talk incoherently.

#### **Full text of clinical treatise on the diseases of the nervous**

The numerous transitions which exist between the two forms of tuberculization of the meninges, their extension from the base to other parts of the brain, the tuberculization of other organs occurring in both varieties, and their analogous appearance in the ventricles, prevent us from discriminating clinically between them, and we are obliged to describe their pathognomonic symptoms under one category. The depression symptoms of motion and sensation, produced by cerebral hypersemia, usually disappear unless the congestion is the precursor of apoplexy. Even when the symptoms are progressing favorably, new dangers may arise from inflammatory reaction around the haemorrhage.

#### **A Treatise on Madness, William Battie, 1758 AD**

According to the experiments of Kussmaul and Tenner, the re-establishment of the current of blood after compression of the arteries in the neck, never gives rise to convulsions, despite the intense cerebral hyperemia which occurs.
