

Molecular analysis of lipopolysaccharide and membrane associated proteins in *Rhizobium Leguminosarum*.

University of East Anglia - Genetic analysis reveals links between lipid A structure and expression of the outer membrane protein gene, *ropB*, in *Rhizobium leguminosarum*

Description: -

-Molecular analysis of lipopolysaccharide and membrane associated proteins in *Rhizobium Leguminosarum*

-Molecular analysis of lipopolysaccharide and membrane associated proteins in *Rhizobium Leguminosarum*

PssO, a unique extracellular protein important for exopolysaccharide synthesis in *Rhizobium leguminosarum* bv. *trifolii*

Transport and metabolism in legume-rhizobia symbioses. *Annu Rev Genet*, 2011; 45: 119—144. The algorithm is described in the ISO 3309 standard.

Genetics and Biosynthesis of Lipopolysaccharide

Biosynthesis of the VLCFA requires six unique genes: *acpXL* acyl carrier protein , *fabZXL* dehydratase , *fabF2XL* 2-oxo-acyl, acyl carrier protein synthase , *fabF1XL* 2-oxo-acyl, acyl carrier protein synthase , *adh2XL* dehydrogenase , and *lpxXL* acyltransferase.

Alteration of lipopolysaccharide and protein profiles in SDS

The *fabXL* genes were induced approximately two-fold in TY, or VMM with 1% hydrolyzed casein, compared with the expression in VMM with mannitol data not shown. Analysis of the lipid A samples was performed in the negative reflectron mode.

PssO, a unique extracellular protein important for exopolysaccharide synthesis in *Rhizobium leguminosarum* bv. *trifolii*

The lipopolysaccharide of *Sinorhizobium meliloti* suppresses defence-associated gene expression in cell cultures of the host plant *Medicago truncatula*. When the lipid A of the parent is compared with that of the mutant, the major penta- and tetraacylated ion clusters in the mutant lipid A were reduced by a mass of 176. The gel was fixed in the absence A or presence B of Alcian blue, followed by silver staining.
