Notes: Includes bibliographies.
This edition was published in 1982

disadvantages since it results in the lack of the holistic view of the causes and effects of tourism development. An excellent opportunity for exchanging opinions and information on the conducted, often in a fragmentary way, researches are scientific conferences.

Thanks to the subsidy provided by the Ministry of Science and Higher Education for EUJN context - the activity popularising science - it was possible to finance the participation of 40 postgraduate students in the II International Conference of Tourism, Hospitality and Recreation organized in Poznań. As a part of the above mentioned context it is also possible to execute the tasks supporting the development of Polish science, mainly by means of its popularization and promotion.

The recruitment of potential postgraduate students (for positions offered as a part of EUJN context) was done through the conference website and mailing aimed directly at scientific environment and the conference co-organizers. The main criterion used for selecting the best possible candidates for postgraduates was the quality of the abstract they sent in and their research work done so far. The postgraduate students who got qualified to participate in the conference represented 15 Polish universities.

For all the participants of the conference mentioned above, i.e. scientists, practitioners and postgraduates representing almost all areas of widely defined free time industry (tourism, recreation, hotel business), the most desired effect of the organization of this conference was the opportunity to meet and discuss important issues concerning current matters of particular areas of science and those included in the conference agenda. It was also a perfect opportunity for the Polish researchers to present the results of their research work on international forum (work took place in subgroups specially created to discuss particular topics) and give them the chance to start new relationships that might result in future scientific co-operation.

The conference organizers would like to express their sincere and deep gratitude to the Ministry of Science and Higher Education for supporting the event financially, promoting young scientists (postgraduates) and helping to make a big step forward in order to internationalise our local university. We would like to direct our special thanks to the representatives of the academic staff who, participating in the conference, kindly consented to back this international initiative.
