Poverty and fever vulnerability in Nigeria: a multilevel analysis

Alaba AO, Alaba O: Malaria in children: implications for the productivity of female caregivers in Nigeria. This study assessed variations in the risks of death in children under age 5 across regions of Nigeria and determined characteristics at the individual and community levels that explain possible variations among regions. The emergence of resistance to insecticides and chloroquine, the cheap anti-malarial treatment widely used for clinical management of uncomplicated malaria, has been held as a major factor in this trend, aided by a general weakening of health systems.

Regional inequalities in under

The geopolitical regions of low- and middle-income countries such as Nigeria are an important sphere of influence on child survival. Principal components analysis allows each asset owned to be given a score, and the factor loading scores are used to create linear composites of each household socioeconomic status variable.

Multidimensional poverty and its determinants: Empirical evidence from Nigeria

Multidimensional poverty and its dynamics in Ethiopia. Variance partition coefficients and Wald statistic were used to express measures of variation.

The Determinants of Regional Poverty in Nigeria Project Topics : Current School News

In this report, the relationship between poverty and malaria in Nigeria was analyzed using a multi-level logistic model. However, households that had bed nets reported less fever than those who did not though the difference did not achieve significance.

Multidimensional poverty and its determinants: Empirical evidence from Nigeria

For instance, malaria is responsible for about a 1.
