### The Glaciation Timeline

These are called continental because they cover most part of the continent.

### Glacial landform

Its function remains a mystery, he said. Except for the higher elevations, where there are glaciers.

### The Weather Channel

So far, 18 bodies have been recovered, while 202 people remain missing. When a smaller tributary glacier intersects a larger trunk glacier, the smaller glacier erodes down less. It is also common at high altitudes - like mountainous areas — wherever the climate is cold.

### Geology Lecture: Alfred Wegener, Glaciers, and Continental Drift

At the molecular level, ice consists of stacked layers of molecules with relatively weak bonds between layers.
