This process of blood diversion can be illustrated by applying slight pressure to the end of a fingernail. The pulp is in intimate contact with the dentin and survives only through the protection of its hard outer covering. Each turn of the needle is done, check the apical patency using K-files 8 to avoid the accumulation of debris in the apical part.

Advanced Ceramics for Dentistry

It always has a flat dentinal transition between it and the proximal gingival level. A B Figure 1-5 Fractured premolar restored by endodontics and post-and-core crown. This phenomenon will be explored in more detail in chapter 4.

Endodontics (ingle).pdf [oq1zv]5r4802]

The diffusion of calcium and hydroxyl ions from the sealer raises the pH at the surface of the root adjacent to periodontal tissues. The principal cells are fibroblasts; the principal extracellular components are ground substance and collagen.
