Readings in U.S. imperialism

In short, dependency theory attempts to explain the present underdeveloped state of many nations in the world by examining the patterns of interactions among nations and by arguing that inequality among nations is an intrinsic part of those interactions. These functions orient the economies of the dependent states toward the outside: money, goods, and services do flow into dependent states, but the allocation of these resources are determined by the economic interests of the dominant states, and not by the economic interests of the dependent state. Austin 1911-1960 exercised in Post-war Oxford an intellectual authority similar to that of Wittgenstein in Cambridge.

Plantations, population, and poverty: The roots of the demographic crisis in El Salvador

Review of World Economics, 140 3 , 393-414. Economic costs of population aging. The cause of such high hopes lies with the inflow of foreign direct investment coming from the developed world.
