Based on the analysis it was found that a 15° operating angle allowed for the longest life cycle of the driveshaft, while the carbon fiber composite presented the highest stress resistance and safety factor, approximately 6 GPa of yield tensile strength and a safety factor of 15.

Design code for process piping as per ASME B31.3

Two main options may be considered: i a wide usage of advanced materials for hot ends components, like impeller and recuperator; ii implementing more complicated thermodynamic cycle, like combined cycle.
