Although volumes have been written on the use of psychological tests in guidance work, only eight of the thirteen schools used aptitude tests and interest inventories, only six used diagnostic and personality tests, and only three used sociometric tests. The administration of antirabic vaccine to persons actually bitten or scratched by the teeth of known or suspectedly rabid animals is a relatively simple and justifiable procedure regardless of the outcome, in that the danger of the disease is far greater and more serious than any ill effects from the vaccine. The questions are used to elicit the answers.
