## Elementary Categories, Elementary Toposes

As part of my course work I want to write an essay on Topos theory.

## Topos

Finding concise principles of this kind has been a huge achievement by mathematicians and logicians.

The next year he was excited to learn from his philosophy professor F. The first three are together a simple categorification of one of the equivalent definitions of elementary 1-topos: a locally cartesian closed category with finite limits and colimits and a subobject classifier. It should be of interest to mathematicians, logicians, philosophers of mathematics and science in general, historians of contemporary mathematics, physicists and computer scientists.

## Works by Colin McLarty

He followed Noether's lectures on abstract algebra for number theory. A model is a set-valued functor from this category which turns cones into limits and co-cones into co-limits.
