Applying or Implementing Particulate Matter (PM) Standards

Further consideration of long-term mean PM 2.

Particulate Matter (PM) Air Quality Standards

Sections 108 and 109 of the Clean Air Act require that EPA carry out a periodic review and revision, where appropriate, of the air quality criteria embodied in the Criteria Document and national ambient air quality standards NAAQS for criteria air pollutants such as PM. Beyond these evidence-based considerations, the Policy Assessment also considers the quantitative risk estimates and the key observations presented in the Risk Assessment.

Committee CASAC and members of the public in October 1999 64 FR 57884, October 27, 1999.

Air Pollution from Particulate Matter

EPA made a First External Review Draft of the updated Air Quality Criteria for Particulate Matter available for review by the Clean Air Act Scientific Advisory

Air Pollution from Particulate Matter

The Policy Assessment also considers the evidence for a broader range of health outcomes judged in the Integrated Science Assessment to have evidence suggestive of a causal relationship, specifically studies that focus on effects in susceptible populations, to evaluate whether this evidence provides support for considering lower alternative standard levels. In such areas, the variability in estimated risks across study areas was largest when regional patterns of reductions in PM 2.

What are the Air Quality Standards for PM?

EPA made a Fourth External Review Draft available for CASAC and public review in June 2003 68 FR 36985. Sections 108 and 109 of the Clean Air Act require that EPA carry out a periodic review and revision, where appropriate, of the air quality criteria embodied in the Criteria Document and national ambient air quality standards NAAQS for criteria air pollutants such as PM. Particulate matter PM is a mix of small particles and liquid droplets.

AIR QUALITY CRITERIA FOR PARTICULATE MATTER (First EXTERNAL REVIEW DRAFT, Oct 1999)

Indicator In initially setting standards for fine particles in 1997, the EPA concluded it was appropriate to control fine particles as a group, rather than singling out any particular component or class of fine particles. The Policy Assessment concludes that identifying this area of uncertainty in the concentration-response relationship could be used to inform identification of alternative standard levels that are appropriate to consider.

What are the Air Quality Standards for PM?
