Agricultural administration in Bangladesh—A note

The Water Foot-print Assessment Manual: Setting the Global Standard Earthscan, 2011.

Agricultural administration in Bangladesh—A note

As illustrated in the graphical abstract, the FS p value strongly correlates with different agro-economic and socio-environmental indicators, but in different ways.

Agricultural administration in Bangladesh—A note

Increasing agricultural productivity therefore requires rethinking the fundamental role of women in providing food security, accompanied by structural and financial support e. For instance, wheat deficit can be compensated by any cereal.

Agricultural administration in Bangladesh—A note

This is one of the reasons for the increasing number of female-headed families in recent years. Per province, local water availability was calculated as local natural runoff minus environmental flow requirement. Fars province has a lower contribution to the total inter-provincial crop export 11% than the Khuzestan province 21%, but its contribution in total unsustainable blue VW export is larger.

Assessing vulnerability to climate change: Are communities in flood

A province exports a specific crop when its per capita production is higher than its per capita demand. Study Conducted for the International Congress SAVE FOOD at Interpack2011 Düsseldorf, Germany Food and Agriculture Organization of the United Nations, 2011. In addition, South-Khorasan has the highest unit of unsustainable blue VW export; although its value decreased by 5.

Development of home garden model for year round production and consumption for improving resource

Furthermore, less food transportation is associated with less food losses ,.

IEEFA report: Bangladesh's power system headed for financial disaster due to overcapacity in coal, LNG power

Global food security—Issues, challenges and technological solutions. Sugar crops and cereals were the main irrigated crop categories in the arid and semi-arid regions, respectively, regarding their contributions in regional production of the irrigated crops 30% and 41%, respectively.
