The populations targeted lived in camps, settlements, and urban areas.

Quality, accessibility, and contraceptive use in rural tanzania

Limitations Limitations to the study include insufficient time, as not all teams were able to implement the suggested 12 FGDs or visit all tertiary level facilities accessed by refugees. In the wake of global commitments to enhance access to SRH—including family planning for all—it is important to examine the state of programming, identify and respond to gaps, and see through recommendations.

Quality, Accessibility, and Contraceptive Use in Rural Tanzania on JSTOR

The facilities were selected using three stratified random sampling strategies for three types of health facilities: public health facilities in Bihar, public health facilities in UP, and private health facilities in UP. Within each district, all clinics under social franchise with a load of 20 or more FP clients per month were included in the sampling frame. The MoH in Jordan has authorized trained midwives to insert IUDs in MoH facilities, which is a substantial change from the time of the assessment when only physicians were permitted to provide this service.

Choice of contraceptive methods in public and private facilities in rural India

Both procedures treat the community-level variables as imperfect indicators of characteristics of the facilities, and they yield nearly identical
