A sustainability assessment of ports

Good emergency plans are realistic as well as pragmatic. Emergency planning is a relatively young field that began to develop systematically in the 1970s, coincidentally with the rise of civil protection. Geographical divisions indicate the spatial jurisdictions to which plans refer, and possibly also to questions of mutual assistance.

Disaster and Emergency Planning for Preparedness, Response, and Recovery

Industrial firms also need plans, so that they can cope with technological failures and their consequences, and commercial companies need to ensure business continuity.

Blackstone's Guide to the Transport and Works Act 1992

The draft guide was available for public comment from 27 March to 14 June 2017 and 43 formal submissions were received. It must address the preparation phase as well as the response phase, as there is a need to make preparations systematic, especially where there is enough prior warning of impact for this to be accomplished successfully.

A Guide to the Planning System in Scotland

The largest estimated wakes were produced by the Passenger class. The aim of this paper is to present a method for interpreting and comparing sustainability in long-term port and port-city plans.

Disaster and Emergency Planning for Preparedness, Response, and Recovery

The council must decide how important these material considerations are. In one exemplary case, a school has developed different strategies to

manage the response to floods and earthquakes, both of which threaten it. Discharged batteries and failed networks of electricity supplies can be enough to make information and communications technologies useless at the height of a crisis.

Blackstone's Guide to the Transport and Works Act 1992

Emergency Planning and Ordinary Citizens A significant portion of a good emergency plan will provide instructions on how to relay information to the general public. However, the main use in emergency planning is to explore possible future events and outcomes.

A Guide to the Planning System in Scotland

Public transport seeks to offer cost effective, environmentally sustainable mass transport services for those who choose to use it, as well as those who have no other transport choice due to their age young or elderly , economic situation, lack of a driver's licence or disability. Based on the evaluation framework, we adopt the directional distance function based on the slack-based measure model SBM-DDF and the coupling coordination degree CCD to measure the sustainability of port cities from the perspective of external influence and internal interaction.
