A properly ventilated attic not only reduces the likelihood that ice damming will occur, but also removes water vapor, which can condense in the attic and cause dry rot on wood and rust on metal building materials. Although this may seem counter-productive, it is important to keep the heat within the occupied portion of your home and away from your attic. Heavy snowfalls can place a lot of pressure on the roof structure, and as that snow begins to melt during milder temperatures, it drains down and refreezes.

Got Icicles Hanging from Your Gutters? Here's Why That Could Ruin Them

Prevention of ice dams and icicles on your roof The best prevention is to: A to clear your gutters every fall, so water can drain off readily and B cool down your roof — insulate and seal the attic, and install roof and soffit vents. One of the best ways you can do this is by using a roof rake. Not only does this pose a risk to your safety, it can also damage your roof.
