

Wireless communications resource management

J. Wiley & Sons (Asia) - [2002.06215] Resource Management in Wireless Networks via Multi

Description: -

- Radio resource management (Wireless communications)
 - Wireless communication systems
 - Wireless communications resource management
 - Wireless communications resource management
- Notes: Includes bibliographical references and index.
This edition was published in 2009

Filesize: 41.94 MB

Tags: #Resource #Management #in #Green #Wireless #Communication #Networks

Radio resource management

It is likely not good enough to just assume that the site survey that was conducted even 5 years ago meets the needs of todays user base. The P-GW may be connected to the network operators IP services.. .

[2002.06215] Resource Management in Wireless Networks via Multi

In this talk we will provide an overview of HPWREN, along with an outline of recent results obtained by our newly developed scheduling algorithm.

Radio resource management

The investment in RRM as a core technology has kept pace.

[2002.06215] Resource Management in Wireless Networks via Multi

In some examples, multi-hop wireless communications system 200 may implement aspects of wireless communications system 100. In some cases, the one or more preconfigured criteria are received in configuration information from a central entity of the multiple-hop wireless network.

Wireless Communications Resource Management

For example, the carrier bandwidth may be one of a number of predetermined bandwidths for carriers of a particular radio access technology e. In some examples, the resource configuration manager 710 may operate in a central entity of a multiple-hop wireless network, and may configure a first node of the multiple-hop wireless network with a set of preconfigured resource allocations, where each of the set of preconfigured resource allocations indicates different wireless resources that are available for communications between the first node and one or more of other nodes.

[2002.06215] Resource Management in Wireless Networks via Multi

In some cases, the first node is a first child node and the indication of the updated resource allocation is received from a first parent node, and

where the second preconfigured resource allocation is selected based on a mapping of a subset of the set of preconfigured resource allocations that are compatible with the updated resource allocation of the first parent node. In practice, the radio map server can store a primitive visualized radio map with low or moderate resolution and allow users to zoom in at specified position and scale to obtain a more refined visual effect via real-time calculation from radio map function.
