PANTHEISM: Nature, universe, science and religion

In more detail Alexander , p. But this does not mean that plants are not intelligent. They were showing off, trying to stagger me with ever-more-ostentatious displays of otherworldly beauty: Look at this! There is no systematic or consistent historical analysis here.

Ovi Magazine : Two books on the Nexus between Science, Religion, Nature and Humanity by Dr. Emanuel Paparella

All the religions have preached love and non-violence. They think that all events in life is due to some divine power and hence due to fate. The idea was, in any case, that behavior was conditioned by reward or its absence, and that one could extrapolate meaningfully from the straightforward demonstration of rattish self-interest promised in the literature, to the admittedly more complex question of human motivation.

The researchers found that the meaningfulness of the stimulus was associated with higher information integration among cortical regions of the brain. However perfunctory his analyses sometimes seem, this book could have been cut in half. On the other hand, lesions of the cerebellum do not affect our consciousness in any obvious way, although the cerebellum is massively interconnected with the cerebral cortex and has four times more neurons.

Unity of Science & Religion

Pantheism affirms the earth and upholds nature as the most sacred temples. We must relate to the universe with humility, awe, reverence, celebration and the search for deeper understanding - in many of the ways that believers relate to their God, minus the grovelling worship or the expectation that there is some being out there who can answer our prayers. This is regrettable, for throughout history every enduring culture embraced the best of its dominant religion, together with the rational and empirical ideas that made up the science of its time.

Toward a New Understanding of Nature, Reality, and the Sacred: A Syllabus, ZYGON Journal of Religion and Science

To recapitulate: E1 It is all just one big coincidence and happened by pure chance. One by one, the elements of our universe begin to reconstitute themselves: the dimensions of time and space returned first, blessing my still-scattered confetti brain with the cozy coordinates of place; this is somewhere! If she is attacked by spider mites, she produces a fragrance cocktail that attracts predatory mites that eat spider mites, but if she is attacked by caterpillars, she produces a slightly different cocktail of fragrances to attract parasitic wasps. Thus, an experience of pure darkness is what it is by differing, in its particular way, from an immense number of other possible experiences.
