A chart is given for comparing the thermal radiation constants with similar data obtained directly from theoretical considerations, using Planck's constant h and. The 1950s brought the first 35mm kinescope camera with sound-on-film rather than separate, from Photo-Sonics, with a Davis Loop Drive mechanism built within the camera box. The object of the present paper is to give data on the reflecting power of the latest production of stellite and also of lacquered silver mirrors.

We examined its sensitivity to monoclonal antibodies mAbs and to antibodies present in sera from COVID-19 convalescent individuals or vaccine recipients, in comparison to other viral strains.
