## Nuclear density functional theory

Here we use machine learning combined with random structure searching RSS algorithms to systematically construct an interat. A kinetic-energy functional of the electronic d. This enables us to represent the infinite, discrete set of stacking sequences within a finite, continuous space of the expansion parameters Hn.

## Random Structure Searching with Orbital

IoneI will work on a combination of nuclear theory and applications.

## Nuclear

Convert the primitive cell to its associated conventional cell. The former formula can be easily generalized for the multi-electron case.

## Covariant density functional theory for nuclear chirality in 135Nd

We report a purely nonempirical generalized gradient approxn.
