Students will be expected to devote 10 hours per week per credit towards the research practicum. The modification of cognitive impulsivity in adult male offenders: Dissertation Abstracts International. Effectiveness of components of self-verbalization training for control of cold pressor pain: Journal of Psychosomatic Research Vol 31 3 1987, 301-310.

**The analysis of behavior: a program for self**

Effects of training in paying attention versus the use of self-instruction in the modification of impulsivity: Revista Latinoamericana de Psicología Vol 17 2 1985, 205-226. These researchers and others drew the field's attention to the fact that individuals are often biased, inefficient, and incompetent information processors, with poor decision-making abilities. Not only was this expansion into cognitive concepts, such as attention and retention, innovative and ground-breaking in its own right, but it also set the stage for more flexible and expansive theorizing than was previously the case under strict behaviorism.

**Self instructional training**

Box 8-2and Figure 8-4include further strategies to manage attention deficits. Teaching self-instruction to high school students: International Journal for the Advancement of Counselling Vol 8 4 1985, 341-353.

**The analysis of behavior: a program for self**

New York: Appleton-Century-Crofts, 1959; Enlarged edition, 1961.
