## Organisational factors: impacting on health for ambulance personnel

Recent neuroscientific research has shed some light on the impact that severe childhood abuse and neglect trauma has on a child's developing brain, specifically as it relates to the development in brain structures, function and connectivity among children from infancy to adulthood.

## Critical Incident Stress Debriefing From a Traumatic Event

Cydulka RK, Lyons J, Moy A, Shay K, Hammer J, Mathews J: A follow-up report of occupational stress in urban EMT-paramedics.

## Children and Trauma: Update for Mental Health Professionals

Understanding what occurs biologically, behaviorally, and psychologically after exposure to traumatic events and how and why some children and adolescents recover over time will enable us to better determine who is in need of treatment and how best to deliver such treatment. These plans involve employees checking in with their coworkers, knowing who they can look to for help, and engaging in self-care throughout their days. Hair residues from methanol extraction were hydrolysed with 1.

## Sanctuary Model

PTSD can be obvious in some employee-survivors and in other cases, PTSD can also exist at a more subtle level only surfacing when a or some sensory stimuli triggers it. If in the view of the therapist there was a need for additional sessions, the therapist could request up to two additional 90-min sessions.

## Trauma exposure, posttraumatic stress disorder and the effect of explanatory variables in paramedic trainees

The fact that ambulance personnel are exposed to greater pressure and stress, due to more emergency calls and close contact with the victims,

might account for this finding,. Hassles Table 4 shows that all the inter-correlations between the subscale predictors of organisational climate were significant.
